

# CONSULTATION RESPONSE

## Response to the amended methodology for the explicit intraday allocation on the French-German border

Brussels, 17 January 2025

### Detailed comments

Our position on the French-German explicit interconnection is to maintain it, as it complements implicit intraday capacity allocation, allowing a fully optimised use of cross-border capacity. We broadly support the amendments proposed by the French and German TSOs to the explicit allocation rules on the French-German interconnector implementing the 15-minute time market unit in intraday.

We would like to further add to Article 18 paragraph 2 proposal on Capacity calculation an update accounting for the multiple calculations occurring throughout the intraday timeframe, rather than the mention of just one intraday capacity calculation.
