

Response to the amended Splitting Rules for the Eleclink interconnector

Brussels, 10 October 2025

Detailed comments

We agree with making the Annex Capacity Split table more readable with minimum and maximum values. Regarding reducing the minimum capacity values for monthly and quarterly products, we note that the change to 0MW should not negatively affect the availability of capacity at all timeframes. The reason evoked for the reduction states allowing Eleclink to meet market demand for additional capacity at alternative time horizons. Market participants having not raised any issues with the previous minimum at 50MW, we are interested in which alternative time horizons Eleclink has identified an increased need for additional capacity.

Overall, we support the changes reflecting name changes in the text.

As a general comment, we recommend that for future consultations on rules that the changes be recognisable in the text, either through Track changes or highlighted text. This would facilitate our engagement with the proposed modifications.
